

Notes

Task 3

HackerRank is a website where students can practice coding and solving problems to get better at both. I use HackerRank a lot to practice coding in a variety of programming languages and areas especially python and java. It has a lot of problems about data structures, algorithms, and basic programming. that helped me get better at thinking logically. By solving these problems, I learned more about coding and felt more sure of myself when it came to technical questions. HackerRank also has coding contests and certifications that can help you get ready for job interviews and placements. Overall, HackerRank has been a great way for me to learn. It not only improved my coding skills, but it also helped me build a strong base that will be useful for my future career.
