

Reflection

Task – 2

As a B. Tech student, building a strong digital presence is just as important as developing technical skills. In the competitive world we live in today, GitHub, LinkedIn, and Kaggle are extremely important in creating the academic and crucial role in professional path that a student like me can conquer. Not only do these sites allow us to showcase themselves and their skills, but they also allow them to connect with professionals and learn from real-world problems. By effectively using them, we can transform classroom knowledge into practical experience and build a strong foundation for future career growth and goals.

- **GitHub** → Show our projects (for coding & projects)
- **LinkedIn** → Show us ourselves (for networking and career growth)
- **Kaggle** → Improve our skills (for data science & learning)

As I continue with my B. Tech journey, I plan to regularly update my work, improve my skills, and use these platforms effectively for my growth and future job skills.
